Class VI

Subject: Science

Chapter: 1(MY BODY)

Topic- Digestive System

Date: 27.03.2020

In previous class you have studied about different organs like ears, eyes, tongue, nose and skin. These organs can be seen from outside. These are called external organs. There are many parts of our body which are present inside and cannot be seen from outside. These organs are called internal organs, Example liver, food pipe, lungs.

Our body is a very complex system. It works as a machine with the help of various organs present in it. The organs form different systems. One such system is digestive system. The mouth, food pipe, stomach and intestines are different organs of digestive system.

What happens to the food that we eat? The food contains carbohydrates, proteins, fats and other nutrients. These are complex materials and are broken down into simpler forms in our digestive system. This process is called digestion.

Digestive System of Human
